Preview:

The screenshot shows the 'Currency Converter' app interface. At the top right, there are icons for 'Share', 'Star', 'Refresh', and a 'Menu' icon. The title 'Currency Converter' is centered. Below it, a description states: 'This is a simple currency converter that uses the exchange rate API from [exchange-rate-api.com](https://exchange-rate-api.com). You can convert between USD, EUR, GBP, JPY, AUD, CAD, CHF, CNH, HKD, and NZD.' The input section includes a text box labeled 'Enter amount to convert' with the value '1,00' and minus/plus buttons. Below this are two dropdown menus: 'From currency' set to 'EUR' and 'To currency' set to 'USD'. The result '1.0 EUR = 1.07 USD' is displayed below the dropdowns.
